

# the Direxion Currency Trends Strategy Plus Fund

Data as of March 31, 2012

## Investment Objective

The Direxion Currency Trends Strategy Plus Fund seeks investment results, before fees and expenses, of 150% of the calendar month performance of the Alpha Financial FX Trends Index ("FXTI"), while implementing a strategic overlay to maintain the Fund's exposure to the FXTI between 145% and 155%.

## Principal Investment Strategy

The investment strategy of The Direxion Currency Trends Strategy Plus Fund includes:

- A quantitative rules-based/trend following approach to currency investing
- Providing exposure to 11 global currencies that can independently profit from a rise or fall in the U.S. dollar
- Monthly review of each currency's recent price trends to determine individual long or short positions for subsequent month
- By leveraging the fund's portfolio to 150%, we attempt to increase the rate of return, while trying to keep the overall portfolio's risk characteristics in an anticipated range between stocks and bonds

## Fund Information

Share Class	A Shares	C Shares	Institutional Class
Fees Gross/Net	1.40/1.40%	2.15/2.15%	1.05/1.05%
Symbol	DXFTX	DXFCX	DXFIX
CUSIP	254939390	254939333	254939374

## Fund Risk/Return Metrics (A-Shares)

## The key benefits of employing a currency futures strategy in investor portfolios:

- Provides access to the currency asset class through a rules-based index approach
- Provides access to broad basket of Developed and Emerging market currencies within one investment
- Currencies as an asset class generally exhibit low levels of volatility providing opportunity to employ leverage
- Historically, currencies have shown a low correlation to both stocks and bonds
- Each currency can profit independently whether there is a rise or fall in the U.S. dollar
- Can be employed as a "strategic" allocation to an overall portfolio

<sup>1</sup> Past performance, especially statistical information, is not necessarily indicative of future results.

<sup>2</sup> **Standard Deviation** is a measure of the dispersion of a set of data from its mean.

<sup>3</sup> **Correlation** is a statistical measure of how two securities move in relation to each other.

<sup>4</sup> **Maximum Drawdown** is the greatest percent decline from a previous high.

<sup>5</sup> **Beta** is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

## The FXTI offers greater diversification over the U.S. Dollar Index

When investors have traditionally thought of currency investments, they have primarily considered only currency mutual funds that are based on the U.S. Dollar Index. However, today, there is another option available.

Some of the differences between the U.S. Dollar Index and the FXTI are:

- U.S. Dollar Index is made up of just developed countries while FXTI includes emerging markets as well
- Over 80% of U.S. Dollar Index is made up of Euro, Yen and Pound while FXTI is more broadly diversified
- The U.S. Dollar Index is a directional index while the FXTI can potentially profit regardless of the direction of U.S. Dollar

*One cannot invest directly in an index. Diversification does not protect against a loss or ensure a gain.*
